## DETAILED ACTION

### *Claim Rejections - 35 USC § 103*

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over Weinstein et al (US Patent 6,251,452).

Weinstein et al teaches an edible ink comprising about 60 to 70 percent corn syrup, 1 to 10 percent of colorants, and the balance moisture wherein the viscosity is in the range of about 20 to 2,000 cps (col. 10 lines 16-34). Weinstein et al and the claims differ in that Weinstein et al does not teach the exact same proportions as recited in the instant claims.

However, one of ordinary skill in the art at the time the invention was made would have considered the invention to have been obvious because the compositional proportions taught by Weinstein et al overlap the instantly claimed proportions and therefore are considered to establish a prima facie case of obviousness. It would have been obvious to one of ordinary skill in the art to select any portion of the disclosed ranges including the instantly claimed ranges from the ranges disclosed in the prior art reference, particularly in view of the fact that;

"The normal desire of scientists or artisans to improve upon what is already generally known provides the motivation to determine where in a disclosed set of

percentage ranges is the optimum combination of percentages", In re Peterson 65 USPQ2d 1379 (CAFC 2003).

Also, In re Geisler 43 USPQ2d 1365 (Fed. Cir. 1997); In re Woodruff, 16 USPQ2d 1934 (CCPA 1976); In re Malagari, 182 USPQ 549, 553 (CCPA 1974) and MPEP 2144.05.

***Allowable Subject Matter***

Claims 38-60 allowed.

The following is a statement of reasons for the indication of allowable subject matter:

1. The Examiner is relying upon Applicant's arguments for the patentability of the instant claims, specifically Applicant's argument that Ahn teaches viscosity of the liquefied sugar component should be 50-90 Brix, however the 90 Brix solution has a viscosity of less than about 20 cp using the test method described in the application, even when the 90 Brix sugar solution was combined with maximum suggested concentration of TiO<sub>2</sub>, the viscosity of the ink base was only about 500 cp was found persuasive and therefore the rejection of the claims has been withdrawn.
2. an edible ink composition comprising a pigment density of about 0.1 g/l to about 0.25 g/l and an ink density of about 1.1 g/l to about 2.0 g/l
3. an article comprising an edible substrate, an edible ink having a viscosity of about 2000 cps to about 16000 cps wherein the ink is transferred to the substrate using a printing process.
